Head of Department of Air Transport, CTU in Prague

Dear readers,

transfer of technology and its commercialization should be an important part of the work of researchers, accompanying the results from research during their mature stage. Research which reaches end-user in its final form is highly regarded commodity for national economy of every country. It is also important that universities are capable of establishing own innovation ecosystem by means of technology transfer. I am glad that our workplace is an example of such success. There are several ways how universities allow for commercial utilization of research results. They can found spin-off companies with direct university share or license research results with startup companies. I wish all researchers that their effort is considered a success in everyday life. I also wish that the fruits of your labor meet perceptive users which desire scientific progress but also simplification, efficiency improvement and improvement of daily operation and production processes. The way towards this goal always begins with enlightened and progressive research partners, which are sufficiently resilient and patient with testing and validation of early experimental results.
